EDUCATION

Bangalore Institute of Technology | Bengaluru, India

Bachelor of Engineering - Computer Science & Engineering; CGPA: 9.28 | Nov 2022 - Present

ALVAS PU COLLEGE | Mangaluru, India

12th Grade (Class XII) - Percentage: 95.5% | 2022

10th Grade (Class X) - Percentage: 97% | 2020

SKILLS SUMMARY

- **Languages:** Java, Python (Flask, Pandas, NumPy), Golang, SQL (MySQL, Oracle concepts).
- **Frameworks/Tools:** Linux, Jenkins, Docker, Maven, Git/GitHub, FastAPI.
- **Core Competencies:** Data Structures & Algorithms, OOP & System Design, Operating Systems, Computer Networks, Software Engineering
- **Cloud & Databases:** AWS, PostgreSQL, MySQL, MongoDB.

WORK EXPERIENCE

Glimmora AI | AI Backend Developer Intern | Jan 2026 – June 2026

- Developing multi-agent AI workflows using LangGraph and Google Vertex AI.
- Building scalable backend APIs with FastAPI, SQLAlchemy, and PostgreSQL.
- Implementing async job processing, schema validation, and reliable AI pipelines.
- Creating responsive React + Vite frontend workflows in an Agile development environment.

PROJECTS

Design Glimmora | *Python, FastAPI, PostgreSQL, React 19, Vite, Google Gemini, PostgreSQL* | Jan 2026 - June 2026

- Architected end-to-end AI interior design platform with multi-phase workflow (Site Intelligence → Program Builder → Project Intent → 2D/3D Floor Plans → Moodboard → Execution).
- Built vision-based floor plan analyzer (Gemini 2.5 Flash) extracting dimensions, room counts, geometry from images with 0.95 confidence and 2.4–5.2s latency.
- Designed deterministic pricing engine (38-item catalogue, 5-tier multipliers, LLM nudge) delivering dual-band budgets (₹6–8L / ₹1–2L) with $\pm 15\%$ admin budget clamping.
- Developed LangGraph AI agents for site intelligence, program synthesis, 2D/3D floor plan generation, and plan optimization with compliance detection.
- Engineered 3D interior pipeline with RoomSpec, furniture matching, and staged prompts for cutaway rendering.
- Built 200+ REST endpoints with Pydantic validation, RBAC, sign-offs, design reviews, and multi-tenant org support (20+ SQLAlchemy models).

Deepfake Detection & Data Integrity System | *Python, Neural Networks, Blockchain* | Mar 2025 - Dec 2025

- Designed a backend analysis system with frame-level confidence scoring, demonstrating strong analytical skills by translating complex visual data into quantifiable reliability metrics.
- Integrated an immutable ledger (Blockchain) architecture to audit detection results, ensuring absolute data integrity, secure traceability, and robust system design.
- Built a scalable preprocessing pipeline using OpenCV to extract and process video frames, improving inference efficiency by $\sim 30\%$.
- Deployed a web-based interface enabling automated authenticity checks with sub-second API response time for images.
- Applied model evaluation metrics (precision, recall, F1-score) to optimize performance and reduce false positives.

CERTIFICATES

AWS Fundamentals by Coursera and [AWS](#).

Data Structures and Algorithms in C and C++ by [Udemy](#).

Machine Learning: [Coursera](#) and Stanford University.

Linux Essentials by [Udemy](#).
